

It's not just about the **support surface**, consider cushions too.

If you're ordering a dynamic mattress, think:

- Will my patient be sitting out?
- Am I actively trying to encourage my patient to get out of bed?
 - Do I need to provide 24-hour pressure area care?

If the answer is yes to any of the above, then you should consider ordering a dynamic seat cushion.

To ensure every patient has access to the correct equipment, Medstrom have added a **new** dynamic seat cushion to their portfolio that can be rented from today.

The Apollo 4 is a high specification, alternating dynamic seat cushion, suitable for up to very high risk patients:

- Equipped with its own ultra-portable control unit, meaning caregivers do not have the inconvenience of disconnecting and reconnecting the control unit when the patient moves from a bed to a chair and back again.
- Anti-slip base with a moulded visco foam ensures comfort, stability and safety when the patient mobilises from the chair.
- Incredibly easy and simple to use control unit for caregiver efficiency.

Remote training is available to support clinicians in the current situation. To order the Apollo 4 dynamic cushion, or for clinical/technical support, contact us 24/7/365.
